For the Children.

A Squirrel War.

One summer a few years ago, on a re-
markable occurrence in squirrel life.
In an old tamarack tree, standing
near the residence, a family of red
squirrels (S. hudsonius) have been our
neighbors for many years. The children
have watched them each season as the
new broods came forth and grew
from small fellows to large, and at
length disappeared from home.

The windows in our sleeping-room
gave us so distinct a view of their nest,
up among the thickest leaves of the
oak, that we almost thought we
knew their faces; we have felt sure that
we could distinguish the old pair. There
have been, we are certain, in the last
eight years, two old pairs, the fathers
and mothers of the successive litters.

We have presumed that the old pair,
of whom I am an old friend, were, as
wrote, were, the oldest son and his
wife, of the first time we began to
study eight or ten years ago.

In August I cut a huge limb from a
great locust tree fifty feet higher west.
This dislodged a squirrel nest of which
we knew little.

The evicted tenant, a large animal
with a family also, decided to move
over to the tamarack. To do so
he must dispossess the present occupant.

War began at once. The locust squirrel
was easily distinguishable by a stub-
tail, the result of some unknown acci-
dent. He first measured strength single-
handed—I should say single-toothed.
I should say single-toothed.

It was a fierce battle, and I am sorry to
say it began with such a storm of
challenges no doubt from the
doughty Prince Locust to try the open
in the hard ground of the lawn drive.

Then each warrior, mounting from
the grassy border up two neighboring
trees, still vociferously barking at each
other, approached nearer upon an ever-
hanging bough.

They seemed always more at home
in combat on boughs. I never saw in
actual combat on the ground in all the
three weeks I studied them.

Crawling nearer and nearer, their
tails bushy and vibrating, the fur on
their backs erect, just as you have seen
an angry dog lift his vertebral hairs,
they finally sprung into each other's
faces. A cuff, a claw, a limb flung
all over for that matter.

I observed a single encounter, that
the combatants had passed each other;
that is, neither had retreated. The
only exception was one engagement in
which Prince Tamarack was knocked
from a bough and fell, catching of
course on the twig before he reached
the turf.

After several indecisive tournaments
of the character described, the world of
squirreldom, all through the grove of
actual combat, became aware of the
fact, and I have counted as many as
nine spectators who assembled to wit-
ness the repeated duels.

No help or interference was ever of-
fered. The others sat about on their
haunches, chattering, possibly, a war-
cry for their champions, but never en-
gaging in the hostilities.

I regret to record that Prince Tamarack
began to weaken in defence of his
rights; after a time he was still
plucky and true to his home, but he
was smaller and perhaps younger than
his antagonist.

My notebook has it that on the 11th
of August Prince Locust chased his
victim from bough to bough of his do-
main, then in a long spring to the next
tree, still on, till the pursuit had ex-
ceeded over eight trees, and only by
jumping to the roof of the old of the
dwelling of Tamarack escape.

Locust then actually invaded the
Tamarack lair! He seemed to be sat-
isfied with a ten minutes' inspection;
emerged picking his teeth, showing
that he had tasted the stolen stores,
and then went home to move his family
in.

Now the singular sequel to my story
is that the next afternoon a congress,
or court, of squirrels assembled on the
roof of the old house. The congress
was a capital, during that period,
providing the money required in nearly
every important combination of forces
on this side of the water. At one time
he traveled and gave a series of lec-
tures about "How to Detect Counter-
feit Money."

One of the most remarkable counter-
feiters that ever lived—at present in
jail, happily—is John Peter McCartney
known as the "King of Counter-
feiters," who has a record of thirty-five in-
dustrial years employed in the manu-
facture of counterfeit money. This
ingenious old scoundrel has fig-
ured as a capitalist during that period,
providing the money required in nearly
every important combination of forces
on this side of the water. At one time
he traveled and gave a series of lec-
tures about "How to Detect Counter-
feit Money."

Bogus Money Makers.

The recent circulation of fresh coun-
terfeit paper money, which even Uncle
Sam's supervisors at the Bureau of En-
graving and Printing confess their in-
ability to distinguish from their own
work, has called public attention very
roughly to a menace to the currency
finances that is particularly new. Pho-
tographic and photochromic processes
of late invention have rendered it easy
for forgers to reproduce any note or
certificate with absolute perfection, so
far as the designs are concerned. As
the paper to print them upon, the
government has used, is of the best
quality, and the process of manufac-
ture is a costly one, it is not probable
that any one who wants to buy, if you
don't believe it, you can easily obtain
from the Secret Service Bureau here a
full account of the manner in which,
not long ago, a skilled operator, took a
large number of real \$1 bills, washed
them in a chemical bath so as to re-
move every trace of the printing, and
then used the plates he had prepared
from the same United States \$100
bills, the result of each being \$100.
That the counterfeiter was effective is
sufficiently demonstrated by the fact
that in one day he passed four of the
\$500 notes on one bank, not being afraid
to hand them right over the counter to
the receiving teller, who took them
without question. There were other
two almost imperceptible defects, which
the counterfeiter had overlooked, but
which were noticed by the bank, and
because they were engraved by me-
chanical process. In photography
there is no error, and that is the reason
why the forger today is in a position,
for the first time, to make a treasury
note or a certificate on Uncle Sam's
own paper that no man, however ex-
pert, can tell from a real one. It is for
this reason that the chief of the secret
service urges, as a last resort, that each
of the United States banks should be
warned to use a distinctive paper of
its own, the imitation of which shall be
forbidden by legal enactment. Even
thus the safeguard is a very insecure
one, and the fact is recognized that
the fight against the forgers must be fought
from this time on upon more perilous
ground than ever hitherto.

It is an interesting thing, in view of
the recent Italian complications, to con-
sider the fact that the United States
bank, according to the records of the
secret service, are so peculiarly addicted
to the crime of counterfeiting that na-
tional banks more people of that nation-
ality have been arrested and convicted
on this charge than of all other nation-
alities put together. Most of these
gangs, too, were Sicilians—the tribe
to which nearly all of the lynched New
Orleans prisoners belonged. One of
the most curious of the Italian counter-
feiting methods is a widespread organ-
ization, seldom betrayed by traitors,
which renders it possible to issue the
same forged money simultaneously from
points at great ways apart—a
scheme calculated to occasion the gov-
ernment detectives much trouble in
their efforts to discover the source of
supply and track the purveyor.

The counterfeiting of coins has by no
means been a recent years with the
improvements which the forgers of
paper money have been able to accom-
plish. Most of the coin counterfeiters
are very clumsy, and it is only once in
a while that a piece of metal appears
which occasions discomfort to the
authorities. About the only danger-
ous coin out at present is a bogus sil-
ver dollar, which the secret service is
applying its energies to catching.

I observed a single encounter, that
the combatants had passed each other;
that is, neither had retreated. The
only exception was one engagement in
which Prince Tamarack was knocked
from a bough and fell, catching of
course on the twig before he reached
the turf.

After several indecisive tournaments
of the character described, the world of
squirreldom, all through the grove of
actual combat, became aware of the
fact, and I have counted as many as
nine spectators who assembled to wit-
ness the repeated duels.

No help or interference was ever of-
fered. The others sat about on their
haunches, chattering, possibly, a war-
cry for their champions, but never en-
gaging in the hostilities.

I regret to record that Prince Tamarack
began to weaken in defence of his
rights; after a time he was still
plucky and true to his home, but he
was smaller and perhaps younger than
his antagonist.

My notebook has it that on the 11th
of August Prince Locust chased his
victim from bough to bough of his do-
main, then in a long spring to the next
tree, still on, till the pursuit had ex-
ceeded over eight trees, and only by
jumping to the roof of the old of the
dwelling of Tamarack escape.

Locust then actually invaded the
Tamarack lair! He seemed to be sat-
isfied with a ten minutes' inspection;
emerged picking his teeth, showing
that he had tasted the stolen stores,
and then went home to move his family
in.

Now the singular sequel to my story
is that the next afternoon a congress,
or court, of squirrels assembled on the
roof of the old house. The congress
was a capital, during that period,
providing the money required in nearly
every important combination of forces
on this side of the water. At one time
he traveled and gave a series of lec-
tures about "How to Detect Counter-
feit Money."

One of the most remarkable counter-
feiters that ever lived—at present in
jail, happily—is John Peter McCartney
known as the "King of Counter-
feiters," who has a record of thirty-five in-
dustrial years employed in the manu-
facture of counterfeit money. This
ingenious old scoundrel has fig-
ured as a capitalist during that period,
providing the money required in nearly
every important combination of forces
on this side of the water. At one time
he traveled and gave a series of lec-
tures about "How to Detect Counter-
feit Money."

Both Better and Cheaper.

The Royal Baking Powder, as an actual fact, is the most economical in use of any made, because of its greatly superior strength.

Both the United States and Canadian Governments in the reports of their investigation of baking powders have published this fact officially.

The other baking powders known in this vicinity are shown by chemical tests to contain from 20 to 80 per cent. less leavening-gas than the Royal. So the Royal, even should it cost more than the others, would be much the cheaper.

In addition to this the superior flavor, sweetness, wholesomeness and delicacy of the food raised by Royal Baking Powder would make any difference in cost insignificant.

When the Royal makes finer and more wholesome food at a less cost, which every housekeeper familiar with it will affirm, why not discard altogether the old-fashioned methods of soda and sour milk, or home-made mixture of cream of tartar and soda, and use it exclusively?

Household Hints.

All jellies and preserves should be put in the jars while warm, as the jelly or syrup, if it be thick, breaks after it has become cold; the jars should be left open till the next day.

Glass jars of a small size, or large tumblers, are better for preserves than chums, for should they not keep well it can be detected immediately.

For potato croquettes take butter the size of an egg, beat it to a cream; add to it gradually two eggs, one teaspoonful of flour, one tablespoonful of salt, and six leaved potatoes which have been boiled and then peeled. Form this mass into sausage-shaped croquettes the size of a large thumb; then in beaten egg, then in fine bread or cracker crumbs, and fry them in plenty of hot fat until of a golden yellow.

Pictures are now frequently hung with ribbons of a color harmonizing with the decorative motive of the room.

To wash Madras curtains, beat and shake out the dust very thoroughly, and then wash in warm water. Boil a quart of soda in a bucketful of water, strain, and put the curtains in while it is yet moderately warm. Rub in more soda water and hang up smoothly in the shade to dry. Press them on the wrong side with a not very hot iron.

If you have boiled potatoes left over, a very nice way to use them, a second time is this: Grate them into the dish they are to be served in, put bits of butter here and there, and dust a little flour salt over them; put them in a hot oven for five minutes.

A good way to discover the presence of moths, and also to destroy them, is to place a lighted candle in a basin of water. The moths will be attracted by the flame, and will drop into the water.

To bake potatoes, wash them very clean, dry them with a towel and lay them in a good oven. They will need about two hours to get done. By baking them you get all the nutriment they contain. They are also the most wholesome, since in baking a part of their starch is already turned into sugar, and thus some of the work to be done by digestion is performed beforehand.

For roasted potatoes, take either small potatoes, of an even size, and peel them; or scoop little balls out of large potatoes, with the help of a potato cutter.

Rhubarb stewed without peeling is of a most attractive pink tint. Pound for pound of sugar and rhubarb, with just water enough to dissolve the sugar, is a good rule, and it should be cooked only till the rhubarb is tender.

To beat eggs quickly add a pinch of salt. Salt cools and cools eggs froth rapidly.

To boil potatoes, wash them very clean through several waters; any dirt remaining will enter into the potato through the medium of the water. Wash them only just before boiling them. Cut away an inch wide of the skin around the middle of each potato; this facilitates the escape of their poisonous substance, called Solanin, which is next to the inside of the skin, and is most hurtful in potatoes not entirely ripe, or in those sprouting toward Spring.

Recipes for the Table.

COFFEE.—The four tablespoons of coffee in a piece of coarse cheesecloth. Put it in a coffee-pot with one pint of cold water. After it has boiled five minutes, add one pint of boiling water, and keep it hot ten minutes. Keep the spout closed with a cork or paper, if there be no tin cover.

SUGARED ORANGE.—Select the light-

Scientific Miscellany.

Wool is made from wool tree fiber.

A machine makes 2,000 corbs an hour.

Underground electric roads are coming.

Laundry irons are heated by electricity.

A German professor claims to have discovered the bacteria which causes baldness by destroying the roots of the hair.

A new substitute for ivory has been invented by a Norwegian. It is called Ivorite, and is made from skinned milk. It will take any coloring.

There is a new pen in the market that with one dip will pick up enough ink to write 200 words. It is not a fountain pen.

A Limoges firm has introduced a new process of firing porcelain by means of petroleum or residuum oils, which give a very pure heat without smoke or fumes.

In France successful experiments have been made with sulphate of iron and with sulphate of copper, line and water as a spray in preventing potato disease.

A new mineral has been discovered to which the name sanguinite has been given. It is bright red in color by reflected light, and upon analysis is found to contain silver, arsenic and sulphur.

Every year a lake of the sea fourteen feet thick is taken up into the clouds. The winds bear their burden into the land, and the water comes down in rain upon the fields, to flow back through rivers.

Experiments on the artificial production of rain are to be made in Kansas. Balloons filled with hydrogen and oxygen gas will be sent up and exploded by a wire connected with an electrical apparatus on the ground.

A new motor, utilizing ordinary gas as well as petroleum, is announced, compact in form, requiring little space and no expensive foundations or attendance. In one-half minute's time starting can be accomplished.

A trial lesson to be made of turning boats on the New York canals by means of electricity. It is thought the running time between Albany and Buffalo can be reduced from seven days to thirty hours. The trolley system will be used.

The heat produced from the light of a fly is only 1 per cent. of an equal amount of candle light. The bug's light is produced by a chemical action, as it is increased by putting the fly in oxygen and diminished in an atmosphere of nitrogen.

The strength of spider silk is incredible. Size for size it is considerably tougher than a bar of steel. An ordinary spider thread is capable of bearing a weight of three grains, while a steel thread of the same thickness would support less than two.

The great Lick telescope reveals about 100,000,000 of stars, and every one of them is a sun, theoretically and by analogy giving light and heat to his planets; this telescope reveals stars so small that it would require 30,000 of them to be visible to the naked eye.

In a paper recently read before the American Philosophical Society, R. Meade Bacon announces that from experiments by himself and others he is led to believe electricity may soon be applied to the purification of water. The exact method by which this result is to be accomplished is not divulged, but it will consist of such an operation upon the predatory bacteria as will destroy the dangers now prevalent, in the drinking water they befall. Every consideration of good health adds emphasis to the hope that Mr. Bacon is not a deluded prophet. Electricity will secure its grandest triumph if it eliminates the perils that lurk in contaminated water.

The United States Geological Survey is purely a scientific bureau of the interior department. During the past year surveys have been at work in twenty-eight states and territories making maps. In this time 35,000 square miles have been surveyed, and 100,000 mapped upon atlas sheets. Besides this a great deal of work has been performed in the Western States and Territories in locating and surveying sites for reservoirs for irrigation purposes. Of these sites thirty-three have been surveyed and located in California, forty-seven in Colorado, twenty-eight in Montana, two in Nevada, thirty-nine in Mexico and one in Utah.

What is believed to be the largest wheel in the world was made recently at the works of the Dickson Manufacturing Company, in Scranton, Penn., for the Calumet and Hecla Mining Companies of Michigan. It is a cog-wheel fifty-four feet in diameter, with an iron face, and is built in the extreme of a perfect circle, with extensions and spokes. The capacity of the wheel, at a velocity of ten feet a second at the inner edge of the buckets, is 20,000,000 gallons of water and 2,000 tons of sand in twenty-four hours. Its weight is 400,000 pounds. The journals are 25 inches in diameter and 3 feet 4 inches long. The total length of the shaft is 25 feet 6 inches.

The New York Court of Appeals has decided that a lady who lost a cloak while trying on suits in a cloak store is entitled to recover the value of the garment and \$500 damages for the trouble and annoyance to which she was subjected. The court ruled that the cloak was lost when she left it in the store, and that she was not negligent in leaving it there.

 NEWEST HARD WAX FOR

BROOKDALE PLAT

(BUFFUM FARM.)

Now is the time for parties having money to invest or wanting to secure a lot for present or future use. These lots are finely located, being only a few minutes' walk from the electric cars and must double in value in from three to five years, thus paying from 25 to 33 1-3 per cent. on the investment. Taxes only \$5 on the \$1,000. Further information may be had at office of

DANIEL WATSON,

Sole Agent,
235 Thames Street, Newport, R. I.

Where large plat can be seen and arrangements made to visit the premises. Prices from 2 1-2 to 5 cents a foot. Parties at a distance should write for information at once.

The Deering Giant Mower.

All who are in want of a Mowing Machine I will invite to call and examine the Deering Giant Mower, with cutting bar 5 feet 3 inches and 6 feet 8 inches, and sections 2 1-4 inches and 3 inches. Repairs always on hand.

Machines Repaired.

It would be well for those farmers who have the

DEERING GIANT MOWERS,

that need repairing, to bring them in now and have them put in good order.

A. A. BARKER,

162 & 164

BROADWAY.

Newport County News.

MIDDLETOWN.

Next Sunday will be observed at the Methodist church as Children's Day. There will be a sermon to children at 2:30 p. m., and an evening concert at 7:30. The church will be decorated with flowers.

Rev. S. O. Benton, held the First Quarterly Conference Wednesday evening.

Miss Bessie G. Chase daughter of Mr. Arthur W. Chase played the first strawberry on the island this year.

PORTSMOUTH.

Rev. Daniel I. Odell of St. Luke's church, Chelsea, will officiate at St. Mary's church on Sunday (tomorrow) morning, in exchange with the rector. He will also be at Holy Cross chapel in the afternoon.

Rev. A. Augustus Morton has returned to his home in this town, after a stay of several weeks in Boston.

At the regular meeting of the Town Council and Court of Probate, the following business was transacted:

The will of Elijah B. Sherman was proved, allowed and ordered recorded, and his widow, Elizabeth P. Sherman, was confirmed as executrix, and gave her personal bond of \$2,000. An instrument in writing purporting to be the last will and testament of Lydia B. Dennis, was proved, allowed and ordered recorded, and her husband, John W. Dennis was qualified as executor and gave his personal bond of \$200, conditioned for the payment of the debts and funeral charges of said Lydia B. Dennis. A petition for the appointment of an administrator on the estate of Quinlan Sullivan, was referred, with an order of notice to be given in the town.

William H. Cory as grand juror and Parker L. Thurston as petit juror were drawn to attend the United States Circuit Court in Providence, June 18. A claim for damages done by dogs to sheep and lambs, of C. Henry Congdon of Middletown, amounting to \$78.90, was allowed and ordered paid according to law. A claim for damages done by dogs to lambs of Coggeshall Brothers of Newport, amounting to \$278.70 was allowed and ordered paid. The Town Clerk was ordered to have 600 copies of the tax book for 1891, printed for distribution as soon as convenient. Councilman Henry Anthony was appointed a committee to have the town's road machines put in order. The town Treasurer presented his bond, which was approved and ordered on file in the Town Clerk's office. It was ordered that playing ball, or kicking football in the public highways of this town is hereby forbidden, and every person violating the above ordinance shall be fined not to exceed \$5, this ordinance to take effect immediately, and the Town Sergeant was directed to enforce the same; complaint having been made to the Council this day, that the eastern end of Boy's line is in very bad condition, and requesting that proper steps be taken to repair the same, the Council respectfully recommended that the Surveyor of Highways in District No. 8, give his early attention to the repair of said line. Bills against the town were allowed and ordered paid as follows: Charles C. Hazard, Overseer of the Poor, for assistance to outside poor

for four weeks, \$10; Oscar C. Manchester for services as Superintendent of Elections in three Town Meetings, \$9; Truman C. Main, Surveyor of Highways for District No. 9 for labor on the roads, \$83.50; Reston P. Manchester for Council Fees, \$2.50.

At a special meeting in the "McCurrie" district, Mr. Warren A. Sherman, was elected trustee to fill the vacancy made by the death of Mr. Elijah B. Sherman.

JAMESTOWN.

There are a great many strangers here just now and every incoming boat adds to the number. But the hotels, boarding houses, and citizens generally are all ready for them, and although this is undoubtedly to be Jamestown's best season there will be no lack of accommodations. The Day View House, with its two hundred or three hundred rooms and all the most modern improvements, is only one of a long list of attractive, well-run summer hotels, and few residences there are on the island that cannot accommodate two or more guests for the season. The Bay View and The Thorndike are the largest houses, and standing within a few feet of the landing, announce to each newcomer the great enterprise of at least two of our well-known townspeople.

The season of course is too early for the hotels, although all are open, and each has a goodly number of guests, but the cottages have nearly all arrived and summer life is everywhere apparent.

The Librarian of the Union Public Library sends in the following report of the circulation of books during the past month: History 2; biography 5; geography and travel 1; science and art 1; poetry and the drama 2; literature and language 1; fiction 91. Total 101.

The petition of the Globe Electric Railway to lay their tracks up to Stone Bridge will be presented at the meeting of the next Town Council.

A concert for Children's day will be given Sunday evening, 14th inst, at the Congregational church.

A strawberry festival will be held at Temple chapel, North Tiverton, Tuesday evening, June 10th.

Gifford & Gough, of Taunton, have just completed a one-and-a-half-story cottage situated across the railroad bridge on land of the Old Colony Railroad.

Emory Field of Taunton has commenced to build a two story summer cottage, dimensions including piazza 10x37, situated north of the railroad station.

Walch and Stubbings of North Dighton commenced Monday to build a two story summer residence 20x24 with all attached.

Tillinghast Dyer is seriously ill with bright's disease.

Mrs. Oliver Howard has been suffering from hemorrhage of the lungs. - 2

Mr. and Mrs. Benj. A. Gage of Pawtucket were in town over Sunday.

Henry Hart of Dighton has been visiting the family of Captain Fernau do Wilcox.

LITTLE COMPTON.

An all day meeting in connection

with the Seacoast Ministerial Union will be held at the Congregational church Thursday June 18th, Rev. Dr. Jordan and H. L. Hastings of Boston have been invited to take a part in the meeting.

A strawberry festival was held at the Congregational church Wednesday evening, a sociable time ensued.

The Rev. C. H. Ever attended the conference meetings held in Newport this week.

The World Filling Up.

A California man has figured it out that the world will, in the ordinary course of things, be fully inhabited in about 182 years, which estimate considerably extends the period at which some learned men believe humanity will be crowded out.

Having previously swept away the Arctic and Antarctic regions as not being essential for his argument, he parceled out the remainder of the earth into: Cultivable land, \$8,400,000 square miles; steppe, scrub, poor grass, etc., 13,901,000 square miles; barren deserts, 3,150,000 square miles; a total of 45,351,000 square miles. The population living upon this he reckons at a little over 1,407,000,000, divided thus: Europe, 300,200,000; Asia 800,000,000; Africa, 127,900,000 (a much lower estimate than most people compute); Australia, 4,720,000; North America, 92,250,000; South America, 36,500,000.

He figures out that the population of the world in 2072 will be 5,001,000,000 which will make an average of 507 individuals to every square mile of inhabitable land. However there is no immediate danger of people being crowded out for lack of breathing space.

Plain Enough.

Of the six young men who "stand at the head of the New York Bar," only one, W. G. Peckham, has a mistake in his name. It is because the other fellows have shaved theirs off. —[Lawrence Journal.]

Mr. Peckham referred to above is a native of Newport and is well known here both socially and professionally.
